

Exam Date: 05/17/2006

NON-CONTRAST CT BRAIN: 05/17/06 at 1530 hours

COMPARISON: Comparison is made with the previous examination dated 06/08/02, brain MRI.

CLINICAL DATA: Patient with headache, pressure around face.

TECHNIQUE: 3.75 mm non contrast axial images were obtained through the brain.

FINDINGS: The ventricles and sulci appear age appropriate without evidence of midline shift or mass effect. There is no evidence of acute intracranial hemorrhage or acute large vessel ischemic changes.

The soft tissues of the scalp and bones of the calvarium appear within normal limites.

The orbits and paranasal sinuses are clear.

IMPRESSION: No evidence of acute intracranial abnormality.
